

Mindy Salzberg-Siegel, D.D.S., P.C.

Allow us to introduce to you a different kind of dentistry: comprehensive care that's ideally suited for patients with extensive and significant dental needs. Envision an intimate, relaxed setting where a competent and loving team is fully invested in your unique needs; a place where extraordinary dental care is delivered with a precise and gentle touch. Welcome to the office of Dr. Mindy Salzberg-Siegel.

Her mission is to transform the health of her patient community by building meaningful relationships based on respect, trust, and informed choice. Her entire team is dedicated to continuous learning, incorporating new thinking, and providing clinical excellence. "By creating beautiful smiles, we help our patients radiate and reflect who they are on the inside and live with greater confidence," Dr. Salzberg-Siegel says. She uses the latest advances in technology, including intra-oral cameras, digital X-rays, and digital imaging. These provide patients with safer, faster, and less invasive treatment options.

In addition, Dr. Salzberg-Siegel has attended extensive postdoctorate training in advanced courses conducted by some of the best-known

innovators in dentistry, enabling her to provide world-class care right here in metro Detroit. As a result, her skill and artistry in full-mouth rehabilitation has —and will continue to — impact the lives of many.

There's a wide variety of ways that full-mouth rejuvenation can be beneficial to patients. The utilization of TMJ therapy can relieve jaw discomfort by correcting a patient's bite. Cosmetic restorations, such as porcelain veneers or crowns, can restore not only a patient's chipped or worn teeth, but also their self-esteem. In addition, dental implants secured in the bone with a porcelain tooth on top can be used to replace unsightly missing teeth. Dental implants can also be used to firmly secure dentures in place, so they never fall out or loosen while speaking, eating, or laughing. "It's amazing that patients can once again experience the look, feel and function of natural teeth," Dr. Salzberg-Siegel says. "I love being able to help patients experience being young again!"

For patients who feel self-conscious due to crooked, misaligned teeth, Dr. Salzberg-Siegel offers Invisalign™. An alternative to braces,

Invisalign™ straightens teeth by using clear, removable aligners.

The patients of Dr. Mindy Salzberg-Siegel are quick to say they've never before experienced such a high level of service, individualized care, and precise dentistry — all delivered in an atmosphere of kindness and compassion.

"Dr. Mindy is so meticulous, she wouldn't settle for anything less than perfection. Because of her expertise and high standards, I've never been happier with my smile." — Kathy V.

By committing herself to continual training, Dr. Salzberg-Siegel is able to offer her patients the finest care modern dentistry has to offer.

"The energy I put into training and innovation pays off in the healthiest, most attractive smiles — the smiles my patients have been dreaming of for years."
